

I strongly oppose NAB petition 04-160 and any other attempt to restrict satellite radio providers (such as XM Satellite Radio and Sirius) from providing traffic and weather channels. I pay a monthly fee to subscribe to satellite radio and find the traffic and weather information very helpful, whether I am traveling, planning to travel, or merely checking on weather conditions in areas where friends, family and business relations may live or work. Satellite radio is the only source of such information that I can hear in my car, office and home 24 hours per day, seven day per week.
